

**Burndown Notes by Date**

Date	Notes
February 14 <sup>th</sup> - February 18 <sup>th</sup>	Because of an influx of CS assignments due during this time, our team was unable to work on the sprint until February 18 <sup>th</sup> .
February 18 <sup>th</sup>	Sprint planning meeting; Added stories & their assignees to the sprint
February 20 <sup>th</sup>	After running a timed-box investigation on the [CHED-32] Accounts story, we concluded that the story estimate should increase from a 6 to an 8 due to increased difficulty
February 25 <sup>th</sup>	Stories were completed and merged; progress being shown on the chart!
February 26 <sup>th</sup>	Spike was caused by increasing a story's estimate [CHED-58]. This change was made due to discovering difficulties during the completion of the story. Sprint complete!

During **sprint 1**, our team assigned **27** story points which we completed successfully. As we moved into **sprint 2**, we increased our velocity to **60** story points due to reading week. Although we had other assignments interfere with progress in the beginning of the sprint, we doubled our sprint 2 planned velocity from sprint 1's velocity under the assumption that we would have more time available after early assignments were complete.

All **60** story points assigned were successfully completed by end of sprint.
