

Isabella Song

2nd year CS/Stats Student

Bio

Isabella is a 19 year old CS/Stats major with strong determination and work ethic. Her hobbies are playing video games and doing art whenever she gets some inspiration. A recent talk about internships has piqued her interest and she is now aiming towards working in the summer to gain more valuable work experience. Isabella has only done coding projects for her school courses but is comfortable with a few programming languages. She intends to apply to a summer internship but has never created a resume before and is worried that she has no experience or personal projects to show on her resume.

Skills

Tech literate - Very comfortable working in both Windows and macOS environments; with modest experience in Linux Subsystems. Understands how to operate a computer relatively well.

Art/Design - Has done a bit of work in front end design using HTML/CSS and has completed a few personal art projects. She has an eye for design.

Wants & Needs

- She has never applied to a job before so she wants to learn how to best fill out her resume as a student.
- In order to show off her eye for design, she wants to be able to customize her resume to her own liking.
- Wants to be able to link her portfolio or personal website that she coded herself.
- She has won an award for an art competition and wants to include it on her resume.

Pain Points

- Because she has no professional experience and has only done school projects, she isn't sure what projects to include or exclude from her first resume.
- Many examples of resumes online do not apply to her. She has found many resumes that are for people who have graduated but has struggled to find examples of student resumes (especially PEY ones!)

Gaining professional work experience is vital to pursuing securing a career in the future!

Peter York

3rd year CS Specialist Student

Bio

Peter is a 21 year old UTM student in his 3rd year. He is looking to apply to PEY next semester since he has just finished his summer internship and joined the Computer Science Student Community (CSSC) at UTM. Peter is adept at programming and group work due to his experience in a moderate amount of personal projects along with experience working on a professional team during his internship. Since Peter has to pay for tuition and other academic/living expenses, he tries to be quite frugal with his money, trying to save where he can and not spending unnecessarily whenever possible.

Skills

Tech savvy - Experienced in Windows/Linux systems that are used with various programming languages for his courses and very familiar with computers in general.

Projects - Has completed a moderate amount of side projects with friends and classmates gaining experience in software and languages using the MEAN/MERN stack and improving programming and mental acuity.

Professional Work - Summer internship working on a sizeable team for a commercial company has given Peter much needed experience in the working world.

Wants & Needs

- Due to his involvement in clubs and internships, Peter wants to be able to showcase his extracurriculars alongside his real world experience so employers know what work he's contributed to.

- Peter also wants to display the numerous CS courses he's taken during 3rd year so that employers can know what his CS knowledge lies in.

Pain Points

- Peter is tired of editing the Microsoft Word file that he's been using as his resume. Between his extracurriculars and courses, transferring the local file between his laptop and desktop takes too much time.
